NECP policy process What happens between now and then?

Esther Bollendorff Friends of the Earth Europe NECP webinar, June 11th 2019

Some dates

- O End 2018: submisison of first drafts
- First half of 2019 review by the Commission (DG CLIMA and ENER)
- O Now: ISC consultation
- 18 or 19 June: EC official publication of recommendations
- O June 20/21: European Council
- O June 25/26: Energy and Environment Councils
- End of 2019: MS review and finalise their plans
- O UNSG meeting in September: EU commitments ahead of COP in Chile to be « Paris proof »

Process

• Official publication will include three documents:

- Commission communication including overall recommendations
- 28 specific recommendations
- Annexes (methodologies for the assessment of national EE and RE contributions, specific objectives and KPIs)

• Possible overall messaging ??

- Plans will deliver 40% GHG emission reductions
- NOT insisting on the fact that plans are not ambitious enough to deliver new RES and EE targets (30% and 32.5% by 2030)
- Specific analysis on RECs comes to similar conclusions as rescoop/FoEE regarding community energy

Next steps in Brussels

- Sharing analysis with relevant officials in the Commission
- Press work and social media work
- Messaging : exposing champions (EL) and laggards (DE)

Messaging

Key take-aways:

- Awareness of energy communities is moderate, but actual planning is low.
- There is a lack of clarity regarding the use of terminology, lack of distinction between energy communities as an organisational concept and other technical activities such as renewables self-consumption.
- There is insufficient acknowledgment of the role that energy communities can play in energy efficiency, and addressing energy poverty.
- Several Member States demonstrate strong commitment and can be looked at for best practice (e.g. Greece).
- Several Member States completely disregarded the role of energy communities in their energy system (e.g. Germany, Malta, Sweden).

Main recommendations for Member States:

- 1. Introduce quantitative policy targets/objectives for energy communities.
- 2. Further **clarify terms and concepts**: distinguish between energy communities and related concepts such as self-consumption.
- Improve the level of detail for proposed policies and measures for enabling RECs and CECs.
- Better acknowledge how community energy can contribute to national energy efficiency objectives and address energy poverty.
- 5. Facilitate citizens' involvement in further development and finalisation of the NECPs.

1 The full report is available on <u>the REScoop.eu website</u>. It includes a detailed picture with summarised comments in the high-level assessment (section 1). Annex 2 compiles relevant information and comments on the 28 NECPs.

BE, BG, CY, DK, FI, FR, HU, IT, LT, LX, PL, PT, RO, ES, UK (15)

Next steps on national level

- Meet your government officials on NECPs and ask for more ambition on
 - energy community development across Europe through defining a target for community energy.
 - the **right to energy** by banning disconnections and provide families in need with financial support.
 - phasing out of fossil fuels by outlining current fossil fuel subsidies and a plan for phasing them out including an end date.
- O Meet them before and after summer
- O Developing guidelines on transposition
- Info on focal points ??

• The Community Power Coalition brings together a diverse network of like-minded organisations which share a common goal of promoting the development of citizen and community ownership in the urgently needed energy transformation towards a 100% renewable energy system. The Coalition includes associations representing energy cooperatives, networks of cities and local authorities, consumer organisations, the renewable energy industry, legal experts and diverse environmental NGOs.
