

Indicative progress in preparing the final National Energy and Climate Plans (NECPs)

CAN Europe

Brussels 3 December 2019

CAN Europe report on draft NECPs

Based on the first insights from the draft NECPs, Member States need to:

Increase the level of climate ambition

Go beyond the minimum requirements for renewable energy and energy savings

Develop robust policies and measures to underpin the delivery of the energy transition

Plan for phasing out coal

Ensure climate-proofing of new energy infrastructure

Shift financial flows away from fossil fuels

Ensure public participation and debate

CAN Europe report on progress made so far by MS in improving their draft NECPs

- A snapshot of progress so far
- Covering 22 countries
- Using publicly available information
- information by mid November 2019

Indicative progress on climate ambition

Country	Changes	Comments
Denmark	Emission projections expected to reflect recent commitments which go far beyond current set targets	Based on recent political decisions
Greece	Emission projections expected to most likely be even lower than current projections which already go beyond the set targets	Based on recent political decisions
Germany, Ireland, Latvia	Most likely updated projections to show decreased emissions but possibly only with a view to achieve the current EU targets	Based on new legislation and measures adopted (the Climate Law/ <i>Klimaschutzgesetz</i> and the climate measures programme 2030/ <i>Klimaschutzprogramm 2030</i> in Germany), new action plan proposed (the Climate Action Plan in Ireland) or information from recent version of draft NECP (Latvia)
Slovakia, Slovenia	Updated emission projections which indicate that it is possible to go beyond the set targets with additional measures	Based on information from recent version of draft NECP
Estonia	Updated projections which indicate further emission reductions with additional measures but without the possibility to check achievement of the non-ETS target	Based on information from recent version of draft NECP
Austria	Currently emissions similar to the previous version of the NECP, waiting for new estimates and projections	Based on information from recent version of draft NECP

Indicative progress on renewable energy contributions

Progress on the 2030 renewable energy contributions

- No improvement yet
- Increased ambition level short of EC's recommendations or only intention to increase stated
- Increased or reiterated ambition level just in line with EC's recommendations
- Increased or reiterated ambition level above EC's recommendations
- No information yet, waiting for new draft or final NDCP
- Not assessed

Created with mapchart.net ©

Indicative progress on energy efficiency contributions

Progress on the 2030 energy efficiency contributions (primary energy)

- No improvement yet
- increased ambition over that of EU's recommendations or only intention to increase stated
- increased or altered ambition over that with EU's recommendations
- No information yet, waiting for revised or final NDCs
- Not assessed

Created with Replicator 2.0

Progress on the 2030 energy efficiency contributions (final energy)

- No improvement yet
- increased ambition over that of EU's recommendations or only intention to increase stated
- increased or altered ambition over that with EU's recommendations
- No information yet, waiting for revised or final NDCs
- Not assessed

Created with Replicator 2.0

Indicative progress on fossil fuel subsidies reporting

Progress on Coal Phase out

- France, Denmark, Ireland, Italy, Netherlands, Finland and Portugal have included coal phase out in draft NECPs
- Since then 3 more countries committed to phasing out coal: Greece, Hungary and Slovakia
- The vast majority of the remaining coal in 2030 will be located in just 5 Member States: Bulgaria, Czechia, Germany, Romania and Poland

Conclusions: still much work to be done!

Overall, some progress has been made but additional effort will be needed to ensure that at least the EU's 2030 objectives are met, let alone the objectives of the Paris Agreement.

- All MS need to substantially increase their national 2030 emission reduction commitments and deliver the required reductions.
- Some progress has been made on the national renewable and energy efficiency contributions, but the risk of not closing the gap towards the EU 2030 energy targets remains, particularly for energy efficiency.
- Some progress has been made on policies and measures but more details are needed in all sectors.
- Three more countries have committed to phasing out coal by 2030. Vast majority of the remaining coal in 2030 will be located in 5 Member States.
- More information on fossil fuels subsidies is provided but comprehensive plans on how to clear them are still missing

Member States have still one month to ensure higher ambition in their final NECPs. The clock is ticking.....
